

# REPAIR OF CONCRETE PRODUCT SELECTION GUIDE

BUILDING TRUST

**Notes:**

This information is provided to assist in choosing the best-suited product for the repair of concrete that has spalled off due to seismic loading. It is not intended to be used for situations where spalling has resulted from reinforcement corrosion, chemical attack or other disintegration mechanisms. It is provided as a guide only. It is, by its nature, very general, and cannot cover all situations. All repair products shall be chosen based on a thorough understanding of the structural requirements and installed in accordance with the information provided on the relevant Product Data Sheets. For assistance please contact your local Sika Technical Representative.
